

Analisis alat litik dari Situs Karangnunggal, Kabupaten Tasikmalaya = Lithic Implements Analysis from Karangnunggal Site, Tasikmalaya Regency

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20408595&lokasi=lokal>

Abstrak

Tasikmalaya Regency has been known as a region that had been occupied from prehistoric period. The site contains many prehistoric artifacts along the Cihelang and Cilangla rivers, especially stone tools artifact. The raw material from the stone tools is diverse such as chert, jasper, chalcedony, quartz, and tuff were found there. The problem is the entire stone tools that were found are not been analyzed yet from the previous research. Through archaeotraciology and lithic implements analysis, it is possible to establish a link between technological behaviors, major quarrying, and tools type. Moreover, this site could help us to understand certain aspect of prehistoric human's behaviors during the upper Pleistocene until early Holocene, especially in West Java.
