Abstrak

Penelitian ini bertujuan untuk membahas hubungan antara dukungan sosial dari orangtua dan self-esteem pada remaja awal anak buruh migran. Metode penelitian ini menggunakan penelitian kuantitatif dengan desain korelasional. Untuk mengukur dukungan sosial dari orangtua dan self-esteem penulis menggunakan alat ukur Child and Adolescent Social Support Scale (CASSS) subskala dukungan orangtua dan Rosenberg's Self-Esteem Scale (RSES). Penelitian ini melibatkan 164 remaja usia 11-16 tahun dengan orangtua buruh migran di Kabupaten Karawang, Jawa Barat.

Hasil penelitian menunjukkan bahwa terdapat hubungan positif yang signifikan antara self-esteem dan dukungan sosial dari orangtua pada remaja anak buruh migran dengan $r=0,264$; $p=0,000$. Dengan demikian dukungan sosial dari orangtua sangat dibutuhkan dalam perkembangan self-esteem yang baik pada remaja awal anak buruh migran.

.....The purpose of this research is to discuss the relationship between social support from parents and self-esteem among early adolescent with migrant worker parents. This research methodology using a quantitative study with a correlational design. To measure self-esteem and social support from parents, the author using Child and Adolescent Social support Scale (CASSS) parental support subscale and Rosenberg's Self-Esteem Scale (RSES). Respondents in this research were 164 adolescent, age 11-16 years old in Cilamaya, Karawang, West Java.

The result showed there is a significant positive correlation between self-esteem and social support from parents with $r=0,264$; $p=0,000$. In conclusion, social support from parents needed for a good development of self-esteem on early adolescent migrant worker's children.
