Abstrak

[**ABSTRAK**]

Penelitian ini membahas mengenai pendaftaran BPJS Kesehatan pada pekerja bukan penerima upah dan merupakan jenis penelitian kuantitatif deskriptif dengan disain studi cross-sectional. Data yang digunakan pada penelitian ini merupakan data primer yang didapat melalui pengisian kuesioner oleh 110 orang pekerja bukan penerima upah. Hasil analisis menunjukkan bahwa sebanyak 37 orang atau 33,6% dari total responden sudah mendaftar BPJS Kesehatan dan sebanyak 73 orang atau 66,4% dari total responden belum mendaftar BPJS Kesehatan.

Hasil uji Chi-Square menunjukkan bahwa ada hubungan yang signifikan antara pendidikan, jenis usaha, paparan informasi JKN, frekuensi keluhan, jumlah keluhan, dan penilaian kesehatan dengan pendaftaran BPJS Kesehatan pada pekerja bukan penerima upah di kelurahan Selamat, Jambi periode Desember 2014.
