[ABSTRAK]

Penelitian ini bertujuan untuk melihat hubungan antara keterlibatan ayah dan perilaku seksual pranikah pada perempuan remaja akhir. Keterlibatan ayah didefinisikan sebagai partisipasi ayah dalam berbagai aspek kehidupan anak (Finley Schwartz 2004). Perilaku seksual pranikah didefinisikan sebagai segala tingkah laku seksual yang didorong oleh hasrat seksual dengan lawan jenis yang dilakukan sebelum pernikahan yang sah (Sarwono 2012). Seiring dengan berkembangnya teknologi, perilaku seksual tidak hanya dilakukan secara fisik, namun dapat menggunakan teknologi. Pada penelitian ini, perilaku seksual mencakup perilaku seksual secara fisik dan menggunakan teknologi. Alat ukur yang digunakan untuk mengukur keterlibatan ayah adalah Father Involvement Scale pada subskala Reported Father Involvement Scale (Finley Schwartz 2004). Sementara alat ukur yang digunakan untuk mengukur perilaku seksual pranikah adalah Cyber Physic Sexual Behavior Scale, alat ukur yang dikonstruksi sendiri oleh peneliti. Responden pada penelitian ini berjumlah 1.365 perempuan yang berada dalam masa remaja akhir di Indonesia, yaitu berusia 19-22 tahun. Hasil penelitian ini menunjukkan terdapat hubungan negatif yang signifikan antara keterlibatan ayah dan perilaku seksual pranikah dengan $r = 0,147$, $p < 0,01$. ;This study was conducted to examine correlation between father involvement and premarital sexual behavior among female in late adolescence. Father involvement defined as father's participation in all aspects of their children's life (Finley Schwartz 2004). Meanwhile premarital sexual behavior defined as any sexual behavior that driven by sexual desire with opposite sex before the legal marriage (Sarwono 2012). Along with the development of technology, sexual behavior can be done not only physically but also using technology. This study of sexual behavior includes sexual behavior physically and with the use of technology. Father involvement was measured using Reported Father Involvement Scale subscale from an adaptation instrument named Father Involvement Scale (Finley Schwartz 2004) and premarital sexual behavior was measured using an instrument constructed by researcher herself named Cyber Physic Sexual Behavior Scale. Respondent of this study are 1.365 female in late adolescence aged between 19-22. The result of this study shows that father involvement had significant negative correlation with premarital sexual behavior among female in late adolescent with $r = 0,147$, $p < 0,01$. ;This study was conducted to examine correlation between father involvement and premarital sexual behavior among female in late adolescence.
