### Abstrak

Penelitian ini bertujuan untuk mengetahui hubungan antara persepsi terhadap keterlibatan ayah dalam domain afektif dan domain perilaku dengan penerapan self-regulated learning pada mahasiswa. Variabel keterlibatan ayah diukur dengan menggunakan The Father Involvement and Nurturant Fathering Scales: Retrospective Measures for Adolescent and Adult Children yang dikembangkan oleh Finley dan Schwartz (2004), sedangkan variabel self-regulated learning diukur menggunakan alat ukur Self-Regulated Learning yang disusun oleh Hariseno (2012). Penelitian melibatkan 283 mahasiswa tahun pertama berusia 18 hingga 21 tahun yang berasal dari berbagai perguruan tinggi.

Hasil penelitian ini menunjukkan hubungan yang positif dan signifikan antara persepsi terhadap keterlibatan ayah dalam domain afektif dan domain perilaku dengan penerapan SRL pada mahasiswa ( $r = 0.193, p < 0.01, \text{two-tailed}$ ;  $r = 0.247, p < 0.01, \text{two-tailed}$ ). Hasil tersebut menunjukkan bahwa peran ayah dalam pengasuhan perlu diperhatikan karena berhubungan dengan perkembangan anak dalam aspek akademik.

*This study examined the relationship between perception of father involvement, consists of father nurturance and reported father involvement, and implementation of self-regulated learning on university students. Father involvement was measured using The Father Involvement and Nurturant Fathering Scales: Retrospective Measures for Adolescent and Adult Children by Finley and Schwartz (2004) and self-regulated learning was measured using Self-Regulated Learning scale by Hariseno (2012). This study involved 283 first-year students aged 18 to 21 years old from various universities.*

*The result indicated that there is a positively significant relationship between both domains of father involvement (father nurturance and reported father involvement) with implementation of self-regulated learning on university students ( $r=0.193, p < 0.01, \text{two-tailed}$ ;  $r=0.247, p < 0.01, \text{two-tailed}$ ). This result showed that father involvement should get more attention because it has a correlation with children's development on academic aspect.*
