Abstrak

[Penelitian ini membahas mengenai perilaku demedikalisasi dari pasien pengguna obat herbal. Penelitian ini menggunakan konsep demedikalisasi oleh Peter Conrad dan penggunaan obat herbal oleh Calixto. Menggunakan pendekatan kuantitatif dengan teknik survei terhadap 100 responden dan menggunakan teknik accidental sampling. Hasil penelitian ini menunjukkan bahwa tingkat perilaku demedikalisasi diantara pasien pengguna obat herbal adalah rendah, namun tingkat penggunaan obat herbal tinggi. Selain itu, terdapat hubungan antara persepsi penggunaan obat herbal dengan perilaku demedikalisasi. Hal ini disebabkan oleh adanya ketakutan yang dirasakan oleh pasien Klinik Sehat terhadap efek samping yang akan ditimbulkan oleh obat-obatan medis. Selain itu, faktor yang berpengaruh adalah obat herbal dirasa menjadi suatu solusi kesehatan yang aman dan bebas dari efek samping. Saran berupa perlu adanya penguatan peran pemerintah dalam mengatur kegiatan medis. Hal ini dilakukan agar kegiatan medis lebih teratur dan lebih aman bagi masyarakat.

;This study discuss the demedicalization behavior among herbal medicine patients. This study uses the concept of demedicalization by Peter Conrad and the use of herbal medicine by Calixto. Using quantitative approach with survey technique to 100 respondents and using accidental sampling technique. The results shows that the level of demedicalization behavior among herbal medicine patients are low, however the level of the use of herbal medicine are high. However, there's a relationship between the use of herbal medicine perception and demedicalization behavior. This is caused by the fear felt by the patient Clinic of side effects that would be caused by medical drugs. In addition, factors that influence is felt to be a herbal medicine health solutions that are safe and free from side effects. Suggestions such as the need for strengthening the role of government in regulating medical activity. This is done so that medical activities more organized and safer for the public.
