Abstrak

[Penelitian ini menganalisis permasalahan dalam komoditas kedelai dan mengukur dampak swasembada kedelai bagi Indonesia serta mencari alternatif kebijakan lain yang berdampak baik bagi masyarakat. Penelitian ini menemukan bahwa terdapat permasalahan dalam perkedelaaian nasional seperti permasalahan benih, pupuk, perubahan cuaca, hama dan rendahnya harga kedelai dibandingkan palawija yang lain. Untuk mengukur dampak kebijakan kedelai terhadap para pelaku ekonomi, penelitian ini menggunakan Cost and Benefit Analysis. Hasil penelitian menyarankan bahwa kebijakan impor lebih menguntungkan dibandingkan jika pemerintah melakukan upaya swasembada kedelai.

;This study analyzes the problems in soybean commodity and measures the impact of self-sufficiency soybean for Indonesia, as well as seeking for the policy alternative which gives good impact to the society. The finding of this study is there are problems in national soybean issue such as problems related with seeds, fertilizer, changes in weather, pest, and the low price of soybean compared to other commodity crops. To measure the policy impact of soybean towards society, this study uses Cost and Benefit Analysis. The result of this study recommends that import policy is more beneficial compared to when government puts efforts in self-sufficiency of soybean.
