Abstrak

[**ABSTRAK**]

Penelitian ini bertujuan untuk menyusun program pencapaian transportasi barang kota yang berkelanjutan untuk kota Depok. Penyusunan program menggunakan optimasi pendekatan subjektif dengan analisis AHP yang dibantu piranti lunak Expert Choice 11 serta optimasi pendekatan kombinatorial. Penyusunan dilakukan program dihitung dengan mempertimbangkan dua aspek yaitu: aspek operasional dan sustainable serta mempertimbangkan dua pendapat pemangku kepentingan yaitu: Pemerintah Kota dan Swasta, yang disusun dalam hirarki AHP. Hasil penelitian menunjukkan urutan program prioritas I yaitu kendaraan ramah lingkungan, pembatasan akses/zona dan terminal barang, program prioritas II yaitu, konsolidasi pengiriman dan pengiriman malam hari dan program prioritas III yaitu, Distribution Center dan pengaturan parkir.
