[ABSTRAK

Kepedulian terhadap lingkungan sangat diperlukan bagi kegiatan perusahaan energi geothermal, walaupun energi geothermal sering disebut dengan energi yang ramah lingkungan. Kerusakan lingkungan tetap saja dapat terjadi bilamana perusahaan tidak memperhatikan masalah lingkungan. Untuk memastikan kegiatan di lapangan tidak merusak lingkungan maka PT X

mengangkat pengawas operasional yang berkompoten yang salah satu tugasnya adalah memastikan bahwa kegiatan perusahaan dapat dilakukan dengan aman, selamat

dan ramah lingkungan. Kompetensi seseorang terbentuk karena pengetahuan, sikap dan keterampilan.

Penelitian ini dilakukan untuk mengetahui hubungan kompetensi pengawas operasional dengan kepedulian lingkungan di PT X. Penelitian ini menggunakan pendekatan kuantitatif dengan cara menyebarkan kuesioner kepada 50 orang responden. Analisis data yang digunakan pada penelitian ini adalah univariat, bivariat dan multivariat. Hasil dari analisis terdapat hubr-rngan antara pengetahuan dengan kepedulian lingkungan (0,887), antara sikap dengan kepedulian lingkungan (0,723), dan antara keterampilan dengan kepedulian lingkungan (0,820), Hubungan ketiga sub variabel kompetensi (secara bersama-sama) dengan kepedulian lingkrngan sebesar (0,954). Jadi terdapat hubungan yang positif dan kuat antara kompetensi pengawas operasional dengan kepedulian lingkungan.

ABSTRACT

Environmental awareness is indispensable for the geothermal energy business. Although geothermal energy is often referred to as an environmentally friendly energy, environmental degradation can still occur when companies do not put any attention to environmental issues. To ensure that field activities do not cause the environment degradation, PT X appointed competent operating supervisors whose job is to make sure that the company's activities can be carried out safely and environmental friendly. Competence is formed through knowledge, skill and attitude. This research was conducted to determine the relationship between operational supervisory competence with environmental awareness in PT X. This study uses a quantitative approach. On this research, the researcher distributed questionnaires to 50 respondents. Analysis of the data used in this research is univariate, bivariate and multivariate. The results of the analysis of the relationship between knowledge with environmental awareness (0.887), attitude with environmental awareness (0.723), and skills with environmental awareness (0.820), The relationship among third competency sub-variable (together) with the environmental awareness is (0.954). Therefore, there is a positive and strong relationship between competence operational supervisor and environmental awareness.;Environmental awareness is indispensable for the geothermal energy business. Although geothermal energy is often referred to as an

environmentally friendly energy, environmental degradation can still occur when companies do not put any attention to environmental issues. To ensure that field activities do not cause the environment degradation, PT X appointed competent operating supervisors whose job is to make sure that the company's activities can be carried out safely and environmental friendly.
