Abstrak

[Karakteristik remaja yang cenderung memiliki rasa ingin tahu yang tinggi dan ingin mencoba hal yang baru sehingga menyebabkan remaja rentan terhadap perilaku seksual berisiko. Penelitian ini bertujuan untuk melihat hubungan pengaruh teman sebaya terhadap perilaku seksual berisiko remaja. Penelitian ini merupakan review literature dengan metode systematic review dan meta-analisis terhadap studi yang dilakukan mahasiswa Universitas Indonesia. Setelah proses penelusuran dan seleksi diperoleh 60 studi yang diikutsertakan dalam meta analisis. Hasil menunjukkan bahwa komunikasi remaja dengan teman terkait perilaku seksual dan remaja yang mempunyai teman yang aktif secara seksual memiliki resiko yang lebih besar untuk melakukan perilaku seksual; Adolescent characteristics tend to have a high curiosity and wanted try something new. This causes adolescent have a risk of sexual behaviour. The objective of research was to investigate the relationship between peers and adolescent sexual behaviour. This research is review literature with systematic review and Metaanalysis to student's study at University of Indonesia. Sixty studies joined in meta-analysis after searched and selected process. The result showed communication with peers about sexual behavior and adolescent with peers who sexual active have increasing risk to sexual behaviour.; Adolescent characteristics tend to have a high curiosity and wanted try something new.
