## Abstrak

[<b>ABSTRAK</b><br>

Penelitian ini menghasilkan bukti empiris dampak migrasi terhadap kesejahteraan rumah tangga di Indonesia, menggunakan data panel Indonesia Family Life Survey (IFLS) tahun 2000 dan 2007, dan metode difference-in-differences dengan propensity score matching. Penelitian ini mengestimasi dampak migrasi pada rumah tangga migran kerja dan rumah tangga migran nonkerja dalam hal pendapatan perkapita, beberapa variabel pengeluaran perkapita dan aset perkapita rumah tangga. Hasil penelitian menemukan bahwa migrasi kerja berdampak terhadap total pengeluaran perkapita rumah tangga, pengeluaran murni pangan perkapita rumah tangga, dan pengeluaran rutin nonpangan perkapita rumah tangga. Sedangkan migrasi nonkerja berdampak terhadap pendapatan perkapita dan aset perkapita rumah tangga. Penelitian ini juga menganalisis dampak migrasi terhadap remitansi pada rumah tangga dengan menggunakan data transfer sebagai proksi. Migrasi kerja menunjukkan dampak yang signifikan terhadap pengeluaran transfer perkapita rumah tangga, namun tidak terbukti memiliki dampak terhadap nett transfer perkapita rumah tangga. Sementara migrasi nonkerja menunjukkan dampak yang signifikan terhadap nett transfer perkapita rumah tangga. Penelitian ini juga menganalisis dampak migrasi terhadap suplai tenaga kerja rumah tangga dimana ditemukan bahwa migrasi kerja membawa dampak signifikan, namun migrasi nonkerja tidak menunjukkan dampak yang signifikan terhadap suplai tenaga kerja rumah tangga.

Kata Kunci: Evaluasi Dampak.

<b>ABSTRACT</b><br>

This study provides empirical evidence on the impact of migration on migrantsending household in Indonesia, using data panel from Indonesia Family Life Survey (IFLS) 2000 and 2007, and difference-in-differences with propensity score matching method. This study estimates the impact of work migration and nonwork migration on percapita income, some of per capita expenditures variables, per capita asset, migrant-sending household. It is found that work migration have impact on total per capita expenditure, per capita pure food expenditure, and per capita non food routine expenditure. Non-work migration have impact on per capita income and per capita asset. This study also analyze migration impact on remittance using transfer data as proxi. Work migration showing impact

significantly on per capita out transfer, but there is no evidence have impact on per capita nett transfer. Non-work migration showing impact significantly on per capita nett transfer. This study also analyze migration impact on household labor supply. It is found that work migration have impact significantly on household labor supply. But non-work migration have no significant impact on household labor supply.;This study provides empirical evidence on the impact of migration on migrantsending household in Indonesia, using data panel from Indonesia Family Life Survey (IFLS) 2000 and 2007, and difference-in-differences with propensity score matching method.
