Abstrak

[ABSTRAK

Kecamatan Sukamakmur termasuk wilayah Kabupaten Bogor yang masih rendah pertolongan persalinan oleh tenaga kesehatan yaitu 55,2% pada tahun 2014. Tujuan penelitian mengetahui faktor-faktor yang berhubungan dengan penolong persalinan di Kecamatan Sukamakmur. Desain penelitian cross sectional, sampel 146 menggunakan probability proportionate to size sampling. Hasil penelitian ibu bersalin di tenaga kesehatan 52,1% dan non tenaga kesehatan 47,9%. Terdapat hubungan variabel pendidikan ibu, pendidikan suami, pendapatan keluarga, kunjungan antenatal care, akses pelayanan kesehatan dan kepercayaan terhadap tenaga kesehatan, dengan penolong persalinan. Variabel kepercayaan terhadap tenaga kesehatan (pvalue= <0,001) merupakan faktor paling dominan (OR 4,55 95% CI 2,11-9,83).

ABSTRACT

Sukamakmur District is one of the areas in Bogor Regency with a low rate of delivery assisted by health care professionals, i.e. 55,2% in 2014. This research aimed to determine the factors associated with the choice of birth attendants in Sukamakmur District. This study used a cross sectional design, collected data from 146 respondents using probability proportional to size sampling method. The study results show 52,1% of birth was assisted by health professionals and 47,9% by non-health personnel. It also identified relationship between mother's education, husband's education, family income, antenatal care visits, access to health services, and confidence in health personnel with birth attendant. Confidence in health professionals (p-value= <0,001) was the most dominant factor (OR 4,55 95% CI 2,11-9,83).

Key words : birth attendants, health.; Sukamakmur District is one of the areas in Bogor Regency with a low rate of
