Abstrak

[ABSTRAK

Kanker merupakan faktor penting dalam beban penyakit global saat ini.

Kasus baru setiap tahun terus meningkat. Angka kasus kanker payudara di Rumah Sakit Kanker Dharmais masih menempati urutan pertama dari jenis kanker lain.

Informasi mengenai kualitas hidup perempuan dengan kanker payudara menjadi sangat penting mengingat masih tingginya angka kasus kanker payudara serta

untuk memberikan dukungan kepada pasien kanker payudara dalam

keberlangsungan hidup jangka panjang. Kualitas hidup pasien kanker payudara

tak luput dari faktor karakteristik individu, faktor karakteristik klinis dan faktor lingkungan sosial. Penelitian ini menggunakan desain case series dengan 90

sampel diambil secara consecutive sampling. Hasil penelitian menunjukkan

bahwa usia, terapi yang sedang dijalani, paparan informasi serta dukungan

keluarga berhubungan dengan kualitas hidup pasien kanker payudara. Saran untuk

Rumah Sakit Kanker Dharmais agar lebih meningkatkan penyebaran informasi

tentang kanker payudara, bagi masyarakat meningkatkan dukungan keluarga

terhadap pasien kanker payudara.

ABSTRACT

Cancer is an important factor in the current global disease burden. New cases each

year continues to increase. The numbers of breast cancer cases in the Dharmais

Hospital Cancer still ranks first than other types of cancer. Information on the

quality of life of women with breast cancer becomes very important considering

the high number of cases of breast cancer and to provide support to breast cancer

patients in the long-term survival. The quality of life of breast cancer patients

lately dependent the individual characteristic, clinical characteristics and social

environmental factors. This study used a case series design with 90 samples

employed consecutive sampling. The results showed that age, the therapy being

undertaken, breast cancer exposure information as well as family support related

to the quality of life of the breast cancer patients. Suggestions one made to the

Dharmais Cancer Hospital to further improve the dissemination of information

about breast cancer, in the family to increase family support for breast cancer

patients.;Cancer is an important factor in the current global disease burden. New cases each

year continues to increase. The numbers of breast cancer cases in the Dharmais

Hospital Cancer still ranks first than other types of cancer.
