Abstrak

[Salmonella sp adalah bakteri patogen yang sering menginfeksi manusia melalui makanan dan menyebabkan gastroenteritis. Penelitian ini bertujuan untuk menganalisa hubungan Salmonella sp dalam makanan jajanan dengan kejadian gastroenteritis pada anak-anak SD di Kelurahan Beji Timur Kota Depok. Merupakan studi cross sectional pada 120 anak SD, 21 orang penjamah makanan dan 46 jenis makanan. Uji chi-square menunjukkan Salmonella sp dalam makanan jajanan mempunyai hubungan yang signifikan ($P=0,005$) dan berisiko

menyebabkan gastroenteritis pada anak-anak SD dengan OR: 7,857 (95% CI: 2,067–29,862). Variabel personel higiene penjamah makanan dan fasilitas sumber air bersih merupakan variabel yang ikut berpengaruh. Disarankan untuk dilakukan peningkatan personel higiene anak-anak, penjamah makanan dan penyediaan fasilitas sanitasi yang memenuhi syarat; Salmonella sp is a bacterial pathogen that frequently affects humans throughout food, and causes gastroenteritis. This study aimed to analyze the relationship of Salmonella sp in snacks food with the incidence of gastroenteritis in children in the village primary school East Beji Depok City. This study a cross-sectional study on 120 primary school children, 21 food handlers and 46 kinds of food. Chisquare test showed Salmonella sp in snacks food has significant relationship ($P = 0.005$) and the risk of causing gastroenteritis in primary school children with OR: 7.857 (95% CI: 2.067 to 29.862). Variable personnel hygiene of food handlers and facilities clean water source is a variable that take effect. Personnel hygiene and source clean water facilities It was advised to improve children's personnel hygiene, food handlers and provision of eligible sanitation facilities; Salmonella sp is a bacterial pathogen that frequently affects humans throughout
