Abstrak

[ABSTRAK

Latar belakang penelitian ini adalah tingginya tagihan biaya obat rawat jalan jika dibandingkan dengan biaya yang ditanggung oleh BPJS dengan menganut sistem tariff INA CBG's. Sehingga diperlukan analisis yang lebih mendalam mengenai faktor-faktor yang mempengaruhi besaran biaya kesehatan tersebut. Penelitian ini menggunakan studi crosssectional dengan metode kuantitatif, dengan melihat faktor usia, jenis kelamin, persepan obat, status dokter dan jaminan kesehatan sesuai dengan data sekunder yang didapat melalui data rekam medis dan tagihan biaya obat layanan rawat jalan. Dan berdasarkan hasil penelitian, faktor yang mempengaruhi biaya obat adalah usia, jaminan kesehatan, jumlah item obat (R/), penggunaan antibiotika dan penggunaan obat generik. Sehingga guna menyikapi permasalahan ini perlu adanya clinical previllage untuk kasus rawat jalan dan kebijakan yang mengatur tentang persepan yang rasional.

ABSTRACT

The background of this study is the high bill outpatient drug costs when compared with the costs borne by BPJS by embracing INA CBG's tariff system. So, we need a more in-depth analysis of the factors that affect the amount of health care costs. This study uses a cross-sectional study with quantitative methods, by looking at factors of age, sex, prescription drugs, doctors and health insurance status in accordance with the secondary data obtained through medical records and bills medicine outpatient services. And based on the results of the study, factors that affect the cost of medication is the age, health insurance, the number of drug items (R /), the use of antibiotics and the use of generic drugs. So as to address these issues need for clinical previllage for outpatient cases and policies that govern rational prescribing, The background of this study is the high bill outpatient drug costs when compared with the costs borne by BPJS by embracing INA CBG's tariff system.
