Abstrak

[ABSTRAK

Ketidakpatuhan terhadap standar pengendalian infeksi berpengaruh pada kualitas pelayanan keperawatan. Penelitian ini bertujuan mengetahui faktor-faktor yang mempengaruhi kepatuhan perawat melaksanakan standar pengendalian infeksi.

Desain penelitian menggunakan deskriptif korelasi dengan rancangan crosssectional pada 353 perawat yang diambil melalui simple random sampling.

Analisis menggunakan uji Mann Whitney, Kruskall Wallis, dan korelasi

Spearman. Faktor yang mempengaruhi kepatuhan perawat dalam melaksanakan standar pengendalian infeksi adalah umur ($p=0.001$), motivasi ($p=0.001$), sikap ($p=0.001$), sarana prasarana ($p=0.001$), pedoman ($p=0.001$), dan supervisi ($p=0.001$). Kelengkapan sarana dan prasarana, pedoman dan supervisi yang berkesinambungan harus terpenuhi agar implementasi SPO dapat dilaksanakan dengan baik.

ABSTRACT

Compliance toward infection control standard influences quality of nursing care.

This study aimed to identify factors influence nurses compliance in implementation infection control standard. The design research was descriptive correlative with cross-sectional approach. Data were collected through primary data as much as 353 nurses. The sampling technique was simple random sampling. Data were analyzed by Mann Whitney, Kruskall Wallis, and Spearman Correlation. Factors influence nurses compliance in implementation infection control standard were ages ($p=0.001$), motivation ($p=0.001$), attitudes ($p=0.001$), infrastructure ($p=0.001$), guidance ($p=0.001$) and supervision ($p=0.001$).

Completeness of infrastructure, guidance and supervision must be fulfilled in order infection control standard can be implemented properly, Compliance toward infection control standard influences quality of nursing care.
