Abstrak

[ABSTRAK

Pelayanan kesehatan komprehensif merupakan hak bagi penderita HIV/AIDS. Merupakan yang penting untuk mengetahui dan menggali secara mendalam terkait ODHA sebagai kelompok rentan dan membutuhkan bantuan penanganan kesehatan. Penggalan pengalaman layanan kesehatan yang diterima ODHA dapat memberikan gambaran proses perawatan dan pengobatan penyakit pada ODHA. Wawancara mendalam dilakukan pada sembilan orang ODHA yang memanfaatkan layanan kesehatan di DKI Jakarta. Dalam penelitian kualitatif fenomenologi ini peneliti menggunakan tahapan analisis data menurut Stevick-Colaizzi. Penelitian ini mengidentifikasi sembilan tema sebagai intisari dari pengalaman ODHA dalam memanfaatkan layanan kesehatan. Sembilan tema tersebut yaitu menunda melakukan tes, respon psikis selama menjalani tes, layanan kesehatan yang diterima ODHA, sikap petugas kesehatan, kendala memanfaatkan layanan kesehatan, dukungan sosial dalam memanfaatkan layanan kesehatan, stigma masyarakat, harapan terhadap pelayanan kesehatan dan ARV serta pemerintah menjamin keberlangsungan hidup ODHA. Hasil temuan merekomendasikan penyedia layanan kesehatan untuk mengoptimalkan peran agar dapat memberikan dampak nyata dalam penanggulangan pandemi HIV/AIDS.
