[ABSTRAK

Dalam bangunan seperti mall, interioritas menjadi aspek yang sangat penting karena dapat menarik pengunjung untuk sekedar mampir atau tinggal dalam waktu yang lama pada suatu toko. Sebagai ruang transit yang ada di dalam bangunan mall, skywalk memiliki lalu lintas pengunjungnya yang lebih cepat dibandingkan dengan area lain. Hal ini menjadikan interioritas pada skywalk tidak begitu terasa di dalamnya, sehingga tidak banyak pengunjung yang singgah dalam waktu lama. Karena itu lah, skywalk menjadi ruang yang ?terluka?. Proses penyembuhan luka merupakan proses alami yang terjadi pada tubuh manusia. Tugas akhir ini mempelajari seberapa jauh mekanisme proses penyembuhan luka pada kulit dapat diaplikasikan terhadap proses penyembuhan luka pada ruang dan seberapa jauh ruang dapat disembuhkan.

ABSTRACT

In buildings such as malls, interiority become a very important aspect because it can attract visitors to simply stop by or stay in a long time in a store. As a transit space in the mall building, skywalk has traffic of visitors faster than other areas. This makes the interiority of the skywalk not so pronounced in it, so there aren't many visitors who stop in a long time. Because of it, the skywalk classified a space that is "wounded". The process of wound healing is a natural process that occurs in the human body. This final project is to study how far the mechanism of wound healing process of the skin can be applied to the process of wound healing in space and how much space can be cured., In buildings such as malls, interiority become a very important aspect because it can attract visitors to simply stop by or stay in a long time in a store.
