[ABSTRAK

Karsinoma buli merupakan kasus keganasan terbanyak pada sistem perkemihan. Lebih dari 50 persen kasus keganasan pada sistem perkemihan merupakan kasus karsinoma buli. Karsinoma buli pada tahap awal biasanya ditangani dengan tindakan operasi Transurethral Resection Bladder (TURB). Intervensi edukasi merupakan hal yang penting dilakukan sebelum dan sesudah operasi pembedahan dilakukan. Edukasi pada klien bertujuan untuk mengurangi ansietas klien, sebagai promosi kesehatan, peningkatan pemberdayaan klien dan keluarga dalam asuhan keperawatan. Intervensi edukasi pada klien meningkatkan kesuksesan dalam mencapai tujuan-tujuan dalam asuhan keperawatan, maka dari itu edukasi perlu dipersiapkan perawat karena merupakan intervensi vital dalam setiap asuhan keperawatan.

ABSTRACT

Bladder carcinoma is the most prevalent malignancies cases of urinary system. More than 50 percent cases of malignancies of the urinary system are bladder carcinoma cases. Bladder carcinoma at an early stage is usually treated with TURB surgery. Education is an important thing to do to Client. Education on the client aims to reduce client anxiety, as health promotion, and increase clients and families empowerment in nursing care. Educational intervention on clients will improve the success rate of nursing care, and because of that, before doing education to client, nurses must be prepare everything.;Bladder carcinoma is the most prevalent malignancies cases of urinary system More than 50 percent cases of malignancies of the urinary system are bladder carcinoma cases Bladder carcinoma at an early stage is usually treated with TURB surgery Education is an important thing to do to Client Education on the client aims to reduce client anxiety as health promotion and increase clients and families empowerment in nursing care Educational intervention on clients will improve the success rate of nursing care and because of that before doing education to client nurses must be prepare everything , Bladder carcinoma is the most prevalent malignancies cases of urinary system More than 50 percent cases of malignancies of the urinary system are bladder carcinoma cases Bladder carcinoma at an early stage is usually treated with TURB surgery Education is an important thing to do to Client Education on the client aims to reduce client anxiety as health promotion and increase clients and families empowerment in nursing care Educational intervention on clients will improve the success rate of nursing care and because of that before doing education to client nurses must be prepare everything]
