[<b>ABSTRAK</b><br>

<b>ABS, Teenage pregnancy is urban public health issue. The causes of teenage pregnancy are urbanization and lifestyle changes. Teenage pregnancy affects not only individual problems but also family's problems, community, and country. Teenage pregnancy is at risk of low birth weight infants (LBW) and prematurity need to be treated early to decrease the morbidity and mortality of mothers and infants. Health education about teenage pregnancy and low birth weight infants treatment pass through Kangaroo Mother Care as nursing intervention on readiness for enhanced parenting and ineffective thermoregulation in low birth weight infants (LBW). Nursing client in this study is Mrs. R, then the result obtained are she and her family understand how to be good parents and low birth weight infants treatment trough Kangaroo Mother Care show signs improve of infant body weight, it is 180 grams in 14 days. It can be concluded that health education can improve the health of mother and her baby.]
