Abstrak

[<b>ABSTRAK</b><br> Tuberkulosis paru merupakan salah satu masalah kesehatan masyarakat perkotaan dan penyebab kematian tertinggi di Indonesia. Penulisan karya ilmiah bertujuan untuk menganalisis asuhan keperawatan pada pasien TB Paru dengan konteks keperawatan kesehatan masyarakat perkotaan. Asuhan keperawatan diberikan sesuai dengan proses keperawatan. Masalah keperawatan utama yang muncul adalah bersihan jalan nafas tidak efektif, intoleransi aktifitas dan kurang pengetahuan tentang TB dan pengobatannya. Intervensi yang diberikan adalah memberikan posisi semipowler, latihan ROM secara aktif, dan intervensi khusus pemberian pendidikan kesehatan tentang kepatuhan minum Obat Anti Tuberkulosis. Hasil evaluasi dari asuhan keperawatan menunjukkan jalan nafas adekuat, aktivitas mandiri, dan peningkatan pengetahuan klien tentang Obat Anti Tuberkulosis. Karya ilmiah ini diharapkan menjadi gambaran bagi perawat medikal bedah dalam pemberian asuhan keperawatan pada pasien dengan TB paru.<b>ABSTRACT</b><br> Tuberculosis TB is one of the disease that caused high mortality inIndonesia The aim of this paper is to analyze nursing care on TB patient usingconcept of urban nursing Nursing problem that occur were in effective airwayclearance intolerance activity and inadequate knowledge about TB treatment Nursing interventions that were given semifowler position active ROM andhealth education about TB treatment The result shown improvement on airwayclearance independent activity and better client rsquo s knowledge about tuberculosismedication The outcome of this nursing care can be used to improve the qualityof nursing care for TB patient in the hospital Keyword Adherence TB patient nursing;Tuberculosis TB is one of the disease that caused high mortality inIndonesia The aim of this paper is to analyze nursing care on TB patient usingconcept of urban nursing Nursing problem that occur were in effective airwayclearance intolerance activity and inadequate knowledge about TB treatment Nursing interventions that were given semifowler position active ROM andhealth education about TB treatment The result shown improvement on

airway clearance independent activity and better client's knowledge about tuberculosis medication. The outcome of this nursing care can be used to improve the quality of nursing care for TB patient in the hospital. Keyword: Adherence, TB patient nursing; Tuberculosis. TB is one of the diseases that caused high mortality in Indonesia. The aim of this paper is to analyze nursing care on TB patient using the concept of urban nursing. Nursing problems that occur were ineffective airway clearance, intolerance activity, and inadequate knowledge about TB treatment. Nursing interventions that were given: semi Fowler position, active ROM, and health education about TB treatment. The result shown improvement on airway clearance independent activity and better client's knowledge about tuberculosis medication.
