Abstrak

This is the first comprehensive handbook entirely dedicated to all the aspects of antiplatelet therapy. The book is divided into three main sections, pathophysiology, pharmacology and therapy, for a total of 23 chapters. A large group of leading experts from different European countries and from the USA, both from academia and industry, have contributed to the book. Besides a detailed overview on the pharmacology and clinical applications of all the currently used or of the novel antiplatelet agents, innovative approaches (e.g. intracellular signalling as an antiplatelet target, small RNAs as platelet therapeutics, etc.) or unconventional aspects (e.g. pharmacologic modulation of the inflammatory action of platelets are also treated.
