Now in its fourth edition and with a new title - Injection Techniques in Musculoskeletal Medicine - this step-by-step guide is a resource used by practitioners who have to deal with the management of painful joints and soft tissues, particularly in relation to sports and overuse injuries. Area by area, guidance is given for each lesion on appropriate patient selection and delivery of the drug. Every technique has its own two-page spread containing a written description along with an anatomical illustration of the region and a photograph showing the anatomical landmarks for the injection.
