

Algebre : elements de mathematique

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20418993&lokasi=lokal>

Abstrak

This includes the concept of modules and Noetherian and Artinian ring, and a radical. This chapter also describes the structure of semi-simple ring. We also provide definitions of the various groups that contribute Grothendieck universal invariants for modules and some descriptions of Brauer groups involved in the classification of simple ring.
