Homogeneous Finsler spaces

Shaoqiang, Deng, author

Deskripsi Lengkap: https://lib.ui.ac.id/detail?id=20419611&lokasi=lokal

Abstrak

Homogeneous finsler spaces is the book to emphasize the relationship between Lie groups and Finsler geometry, and the first to show the validity in using Lie theory for the study of Finsler geometry problems. This monograph introduces the most recent developments in the study of Lie groups and homogeneous Finsler spaces, leading the reader to directions for further development. The book contains many interesting results such as a Finslerian version of the Myers-Steenrod Theorem, the existence theorem for invariant non-Riemannian Finsler metrics on coset spaces, the Berwaldian characterization of globally symmetric Finsler spaces, the construction of examples of reversible non-Berwaldian Finsler spaces with vanishing Scurvature, and a classification of homogeneous Randers spaces with isotropic S-curvature and positive flag curvature.
