

Interpolation, Schur functions and moment problems II

Alpay, Daniel, editor

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20420465&lokasi=lokal>

Abstrak

This book is primarily devoted to topics related to matrix versions of classical interpolation and moment problems. The major themes include Schur analysis of nonnegative Hermitian block Hankel matrices and the construction of Schur-type algorithms. This book also covers a number of recent developments in orthogonal rational matrix functions, matrix-valued Carathéodory functions and maximal weight solutions for particular matricial moment problems on the unit circle.⌘
