Abstrak

Identifies critical actions for safe practice for patients who are experiencing respiratory emergencies, ischemic stroke, acute coronary syndromes, and lethal arrhythmias. The first section reviews core material that is essential for the first 10 minutes of cardiovascular emergency care. The second section outlines considerations for ongoing care and also addresses the special considerations needed to care for patients who have conditions that result from complex causes. Accompanying DVD contains video review of many essential skills discussed in the book, as well as digital flashcards to prepare for ACLS testing.
