

Atlas of pediatric cutaneous biodiversity : comparative dermatologic atlas of pediatric skin of all colors

Silverberg, Nanette B., author

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20421003&lokasi=lokal>

Abstrak

This book provides a brief pictorial atlas highlighting the variations of appearance of skin, hair, and nails, both in the natural state for children of all colors, and the appearance when affected by skin disease. The atlas includes five ethnic groupings, Caucasian, African, Afro-caribbean, and African American, Asian, Hispanic and Latino, and Indian and Middle Eastern (Arab). Each group is assessed for known or clinically relevant skin differences using clinical photographs, basic microscopy, and dermoscopy.
