Abstrak

Energy, transport, & the environment : addressing the sustainable mobility paradigm brings together leading figures from business, academia and governments to address the challenges and opportunities involved in working towards sustainable mobility. Key thinkers and decision makers approach topics and debates including, energy security and resource scarcity, greenhouse gas and pollutant emissions, urban planning, transport systems and their management, governance and finance of transformation, the threats of terrorism and climate change to our transport systems. Energy, transport, & the environment is divided into six sections. These sections address and explore the challenges and opportunities for energy supply, road transport, urban mobility, aviation, sea and rail, as well as finance and economics in transport. Possible solutions, ranging from alternative fuels to advanced urban planning and policy levers, will be examined in order to deepen the understanding of currently proposed solutions within the political realities of the dominating economic areas.
