

Solar flare magnetic fields and plasmas

Fan, Yuhong, editor

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20424705&lokasi=lokal>

Abstrak

This volume is devoted to the dynamics and diagnostics of solar magnetic fields and plasmas in the sun's atmosphere. Five broad areas of current research in solar physics are presented: (1) New techniques for incorporating radiation transfer effects into three-dimensional magnetohydrodynamic models of the solar interior and atmosphere, (2) The connection between observed radiation processes occurring during flares and the underlying flare energy release and transport mechanisms, (3) The global balance of forces and momenta that occur during flares, (4) The data-analysis and theoretical tools needed to understand and assimilate vector magnetogram observations and (5) Connecting flare and CME phenomena to the topological properties of the magnetic field in the solar atmosphere.
