

Pengembangan Set Multipleks Penanda DNA Mikrosatelit untuk Analisis Variasi Genetik Padi dan Kedelai

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20425012&lokasi=lokal>

Abstrak

Detection of multiplex microsatellite markers in a single capillary array on a laser detection system is traditionally conducted with specific primers that are labelled with fluorescent dyes. An alternative method using fluorescent labels that are appended to 5' end of universal primer M13 instead of to the specific primers offers flexibility in designing multiplex panels and a less expensive method ...
