How and why do strategic perspectives of financial institutions differ by class and region? *Strategies of Banks and Other Financial Institutions: Theories and Cases* is an introduction to global financial institutions that presents both theoretical and actual aspects of markets and institutions. The book encompasses depository and non-depository Institutions; money markets, bond markets, and mortgage markets; stock markets, derivative markets, and foreign exchange markets; mutual funds, insurance, and pension funds; and private equity and hedge funds. It also addresses Islamic financing and consolidation in financial institutions and markets. Featuring up-to-date case studies in its second half, *Strategies of banks and other financial institutions* proposes a useful theoretical framework and strategic perspectives about risk, regulation, markets, and challenges driving the financial sectors.
