Abstrak

ABSTRAK

Penelitian ini dilakukan untuk melihat hubungan antara social comparison dan motivasi berprestasi pada mahasiswa di Indonesia. Partisipan penelitian ini adalah 488 mahasiswa program sarjana dan diploma dari berbagai perguruan tinggi di Indonesia. Social comparison diukur dengan menggunakan INCOM oleh Gibbons dan Buunk (1999). Motivasi berprestasi diukur dengan menggunakan AMS-R oleh Lang dan Fries (2006). Hasil penelitian menunjukkan bahwa social comparison dimensi ability tidak berkorelasi secara signifikan dengan motivasi berprestasi dimensi hope of success, namun berkorelasi secara positif dan signifikan dengan dimensi fear of failure. Social comparison dimensi opinion berkorelasi secara positif dan signifikan dengan motivasi berprestasi dimensi hope of success dan dimensi fear of failure. Dari hasil tersebut, disarankan untuk melakukan penelitian lanjutan untuk melihat pengaruh antara kedua variabel itu.

ABSTRACT

This study was conducted to investigate the correlation between social comparison and achievement motivation among college students. The participants were 488 undergraduate and diploma students from various universities in Indonesia. Social comparison was measured by INCOM, constructed by Gibbons and Buunk (1999). Achievement motivation was measured by AMS-R, constructed by Lang and Fries (2006). The results show that social comparison's ability dimension is not significantly correlated with hope of success dimension of achievement motivation, but positively and significantly correlated with the fear of failure dimension. Social comparison's opinion dimension is positively and significantly correlated with achievement motivation's hope of success dimension and fear of failure dimension. Based on these findings, further research is suggested to find the effect between these two variables.
