## Abstrak

Usia prasekolah merupakan masa keemasan bagi pertumbuhan dan perkembangan anak. Penelitian ini bertujuan untuk mengetahui gambaran tumbuh kembang anak berdasarkan karakteristik pengasuh. Desain penelitian yang digunakan yaitu deskriptif dengan jumlah responden 93 orang yang dipilih secara konsektif. Hasil penelitian menunjukkan 74,2% balita memiliki pertumbuhan normal, dan 69,9% balita dengan perkembangan yang sesuai.

Berdasarkan karakteristik pengasuh menunjukkan, bahwa mayoritas balita yang diasuh oleh ibu memiliki pertumbuhan normal 57% dan perkembangan sesuai 54,8%. Rekomendasi penelitian ini adalah perlunya pengadaan konsultasi bagi orang tua tentang tumbuh kembang anak di masyarakat melalui sekolah atau posyandu.

.....Preschool is the golden period for growth and development in children. The aim of this research was to describe the growth and development of preschool-aged children based on caregiver characteristics. This research used descriptive design involving 93 respondents with consecutive sampling technique. The results showed that 74,2% of respondents have normal growth and 69,9% of respondents have appropriate development.

Based on the characteristics of caregivers, it can be seen that the majority of children who are taken care by mothers have normal growth and appropriate development by 57% and 54,8% consecutively. This study recommends the provision of consultations for parents on child development through school or village health center.
