Abstrak

The term of orality is often understood in the narrow sense. It is often paired with the term of literacy. Language actually contains other matters than merely sound and letters. The idea that language is human and vice versa is believed by the hermeneuticists. Verbal language is always regarded as less important than written language. However, each has its own strengths and characteristics with which each individual's thinking pattern is constructed. Therefore, it is necessary that these two language types be treated equally.
