Indonesian Journal of Dentistry 2006; Edisi Khusus KPPIKG XIV: 210-214

One of the impacts of traffic accident that is often seen by a dentist is mandible fracture. To prevent deformation of mandible because of a slow management, it is better to treat the fracture as soon as possible. The treatment can be done with an open/close reduction, depending on case. An immediate management of mandible fracture is very important to prevent malunion, malocclusion, and stomatognathic dysfunction.
