

Distribusi karakteristik sudden strom commencement stasiun Biak berkaitan dengan badai geomagnet

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20436801&lokasi=lokal>

Abstrak

Geomagnetic storm represents natural phenomenon caused by interaction between high speed solar wind and magnetosphere which is associated with southward interplanetary magnetic field. By processing data of H geomagnetic storm, it is obtained that amplitude and depression of H geomagnetic component intensity distribution show similar pattern, close to exponential model.
