

Telaah model numerik mekanisme terjadinya flare matahari

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20437138&lokasi=lokal>

Abstrak

Flare observations are numerous, and this approach should be supported by theoretical approach especially through modelling by numerical simulation. We make an analysis of reconnection process which precedes flare through numerical simulation. This method is the best method in flare modelling because processes in flare behave non linearly so analytical method can't be used.
