

The extraction of oil from nannochloropsis sp. microalgae using ultrasonic and fermentation as cell disruption

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20437733&lokasi=lokal>

Abstrak

Algae are a promising source of biofuel but claims about their lipid content can be ambiguous because extraction methods vary and lipid quantitation often does not distinguish between particular lipid classes. One of algae types that meet this condition is Nannochloropsis sp.
