Abstrak

Growth and development of teeth position is influenced by few factors such as race factor. Eating habit will influence the position and condition of the teeth in the bone, beside that the teeth position in the jaw is influenced by genetic factor, in this case race. Race factor will influence the growth and development of dentocraniofacial, which every human race has their own standard respectively. Based on those findings, it should be more studies conducted concerning the standard norm of teeth according to each race.
