

Studi tanaman ganyong (*Canna edulis*) sebagai alternatif sumber karbohidrat dalam rangka meningkatkan ketahanan pangan (studi kasus di Desa Jlegiwinangun, Kecamatan Kutowinangun, Kabupaten Kebumen, Jawa Tengah)

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20440098&lokasi=lokal>

Abstrak

Ganyong (*Canna edulis*) is common alternative snack among villagers in southern part of central Java. Its starch content can be used for making "soon" (white noodle). In the future ganyong is potential for staple food and other usage due to its nutrition content. At the village of Jlegiwinangun, ganyong was planted as inter cropping plant in the field and in the home garden.
