Abstrak

Skripsi ini membahas mengenai sistem informasi Jamkesmas mulai dari pencatatan hingga pelaporan di Puskesmas Seroja Kota Bekasi. Analisis menggunakan prosedur penilaian cepat dalam pengumpulan data primer, serta pendekatan sistem dan metode prototype. Hasil analisis memberikan informasi akurat tentang data kepesertaan, pelayanan, dan pendanaan berdasarkan indikator program Jamkesmas yang berlaku melalui sistem basis data. Hal ini dikarenakan data rutin yang berperan sebagai tolak ukur keakurasian data belum terkelola dengan baik. Pendokumentasian data harian hanya sebatas pencatatan diatas kertas saja sehingga data belum bisa diintegrasikan satu sama lain. Akibatnya data Jamkesmas yang ada belum dimanfaatkan secara optimal.

.....This thesis describe about Information System of Health Insurance for the Poor (Jamkesmas), start from data collecting until produce a report at Seroja Health Centre Bekasi City. The Analysis using Rapid Assessment Procedure in main data collecting, also system approaching and Prototyping Method. Result of analysis gives accurate information about participant data, service, and financing based on indicator Jamkesmas program applied through data base system. This thing is because of routine data standing as accuracy yardstick of data has not been managed carefully. Documentation of daily data only limited to recordkeeping to just paper so that data has not can be integrated one another. As a result the Jamkesmas data has not been exploited in an optimal perform.
