

## Surface modification technologies XIV: proceedings of the fourteenth International Conference on Surface Modification Technologies held in Paris, France, September 11-13, 2000

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20442523&lokasi=lokal>

---

### Abstrak

#### Contents :

<ul><li>Foreword</li><li>Surface Modifications in Aerospace Applications</li><li>In Situ Formation of Titanium Carbide by Reactive Plasma Spraying with Elemental Titanium Powder</li><li>A Comparative Study of Mechanical Properties and Residual Stress Distributions of Copper Coatings Obtained by Different Thermal Spray Processes</li><li>Damage Progression in Thermal Barrier Coatings During Four-Point Bend Tests with Acoustic Emission Monitor</li><li>A Study of the Strength of Spray Coated Layer by Cross Sectional Electron Microscopy</li><li>A Comparative Study of Different Plasma Sprayed Coatings Applied to Railway Disc Brakes</li><li>Optimization and Monitoring of the Production of Thermal Barrier Coatings</li><li>Benefits of Surface Preparation by Laser for Thermal Sprayed Coatings</li><li>Fabrication of TiO<sub>2</sub> Photocatalytic Coating by Thermal Spray Process</li><li>Indentation Fracture Toughness and Interfacial Indentation Tests Associated with Acoustic Emission on WC-Co Coated Specimens</li><li>Fatigue Processes in Bodies with Surface Coatings</li><li>Laboratory Evaluation of Hot Erosion Resistance of Six Thermal Sprayed Coatings</li><li>Vacuum Plasma Sprayed WC-12% Co Coatings: Optimization of Spraying Parameters and Subsequent Laser Treatment</li><li>Optical Properties of Al Film Deposited on Polymer</li><li>Slurry and Thermal Spray Coatings for Protection of New Generation Steam Engine Components</li><li>Surface State Modifications in Powder Products Induced by a Spray-Coating Technique</li><li>Relationship Between Dilution and Solidification Cracking in PTAW Ni-Base Superalloy Overlays</li><li>A Novel Friction Thermomechanical Process for Surface Modification of Aluminum Castings</li><li>Characterization and Modelling of Multilayer Ti-Based Coating</li><li>Electrolytic Deposits on Stainless Steel as High Temperature Coatings</li><li>Investigation of Ceramic Sol-Gel Thin Films for Wet Corrosion Protection of Mild Steel</li><li>Need for Environmentally Friendly Surface Modification Technology in the Japanese Automotive Industry</li><li>Development of Bioceramic Composites: Processing Solutions and In-Vitro Evaluations</li><li>Wear of Ultra High Molecular Weight Polyethylene Sliding Against a CoCrMo Coating Applied by Physical Vapor Deposition</li><li>Physico-Chemical and Mechanical Approaches to the Dentin-Resin Adhesive Interface</li><li>Surface Quality of Master Screw Dental Implant</li><li>Suspension Plasma Sprayed Hydroxyapatite Nano-Powder for Biomedical Application</li><li>Ceramographic Analysis of Ceramo-Metal Bonding Interfaces</li><li>A Nanoindentation Study of PVD WC/C Coatings Supported by Cross-Sectional Electron Microscopy Observations</li><li>Effect of a Ni Interlayer on the Corrosion Behavior of CrN PVD Coating Deposited onto Plastic Mold Steels</li><li>Structure of Diamond-Like Carbon Films Obtained by PECVD: XPS, X-Rays Reflectometry and Hardness Measurements</li><li>Application of Surface Modified Silica Thin Films to Biosensors</li><li>Surface Treatments and Coatings in the Steel-Making Industry: From Metallurgy to Processing</li><li>Changes in Structure and Properties of AlN Thin Films Due to Surface

Oxidation

- Carbo-Nitride Thin Films and Nanofibers Synthesized by HF-CVD
- Effect of Various Plasma Nitriding Procedures on Surface Characteristics of P/M Ledeburitic Tool Steels
- Characterization of PVD Ni Coatings Deposited at Various Conditions
- Challenges and Opportunities in Surface Engineering
- Correlations Between Surface Modification and Tribological Performance of Brake Pads
- Development of Novel Fe-Cr-C/NbC Composite Materials for Wear Resistant Coatings Using a Laser Rapid-Alloy-Prototyping Technique
- Dose Rate Influence on the Microstructure of Chromium Steels Subjected to Low-Energy Nitrogen Ion Implantation
- Effect of Coatings on Mechanical Properties and Fretting Fatigue Strength of a Titanium Alloy in Cryotechnical Environment
- Wear Behavior of Colored Stainless Steel
- Wear Analysis of Coated Carbide Tools when Machining Nickel Base, Inconel, Alloy
- Wear Modelling of Contact Plan/Plan Between Graphite and Titanium Alloy
- Wear Criterion for Cold Forging Tool
- Surface Modification of a FeCrAlY-Alloy by Ion Implantation and Oxidation for Potential Implant Applications
- Functionally Graded Materials Produced by Laser Cladding: A Novel Approach
- Improvement of Adhesive Properties of Polymers After Excimer Laser Irradiation
- Properties and Applications of Coatings Deposited by Laser Beam
- WC-Co Plasma Sprayed Coatings Partially Re-fused with Laser
- Modeling of Temperature Fields in Graphite Target at Pulsed Laser Deposition of CN<sub>x</sub> Films
- Laser Treatment of BN Pre-Coated Steels: Correlation of Hardness and Microstructure
- Surface Alloying of Ceramic Powders on F
