ABSTRAK

Nama : Anditha Ratnadhiyani
Program Studi : Magister Ilmu Keperawatan
Judul : Pengalaman Wanita Pasca Sindrom Koroner Akut dalam Adaptasi terhadap Perubahan Kemampuan Fungsional Pemulihan pasca sindrom koroner akut mencakup proses adaptasi individu terhadap perubahan kemampuan fungsional. Perkembangan dalam penelitian di bidang kardiovaskular menunjukkan dampak dan prognosis sindrom koroner akut yang lebih buruk pada wanita jika dibanding pria, yang dikaitkan dengan perbedaan dalam persepsi, prediktor klinis, dan status sosioekonomi. Penelitian ini bertujuan untuk mengeksplorasi pengalaman wanita pasca sindrom koroner akut dalam adaptasi terhadap perubahan kemampuan fungsional. Metode kualitatif dengan desain fenomenologi deskriptif digunakan untuk memperoleh gambaran pengalaman sepuluh partisipan dalam penelitian ini. Pengambilan data dilakukan dengan wawancara mendalam, kemudian dilakukan content analysis dengan metode Colaizzi. Teridentifikasi enam tema utama dari penelitian ini yaitu respon ketidaknyamanan setelah mengalami sindrom koroner akut, penurunan kemandirian dan kemampuan melakukan aktivitas sebagai dampak perubahan kondisi fisik, self-adjustment sebagai coping terhadap perubahan kemampuan fisik, revaskularisasi memberikan harapan kesembuhan, pengaruh dukungan terhadap psikologis, dan self-effort untuk memulihkan kemampuan fungsional. Hasil penelitian menunjukkan peran penting faktor psikologis dalam proses adaptasi wanita selama pemulihan, sehingga direkomendasikan peningkatan intervensi yang mendukung psikologis dalam tatalaksana pasien wanita dengan sindrom koroner akut. Kata kunci: adaptasi, kemampuan fungsional, sindrom koroner akut, wanita

Study Program Master of Nursing
Title The Experiences of Women after Acute Coronary Syndrome in Adaptation to Functional Ability Changes
Adaptation to functional ability changes is part of recovery after Acute Coronary Syndrome ACS . Earlier studies have indicated that women with ACS have worse impact and prognosis. It is associated with perception differences, clinical predictors and socio economy status. The aim of this study is to explore experiences of women after ACS in adaptation to functional ability changes. A qualitative study using phenomenological description design was conducted. Ten women after ACS participated in individual in depth interview. Data were analysed using Colaizzi 's procedural approach. Women 's experiences in adaptation were formulated into six main themes 1 inconvenience response to ACS 2 decrease in autonomy and ability to perform activities as a result of physical changes 3 self adjustment as a mechanism to cope with physical ability changes 4 being recovered by revascularization 5 social support promotes psychological improvement and 6 self efforts to improve functional abilities. This research denotes a major role of psychological factors in women 's

adaptation during recovery process. Therefore, developing a psychological based intervention for women after ACS is an important strategy to improve outcomes. Keywords acute coronary syndrome, adaptation, functional ability, women
