Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20451513&lokasi=lokal>

Abstrak

During the development of any transormation will put the services while leaving the primary and diminishing share. Using Input-Output model, we analyse the possibilities of making DKI Jakarta as services town. Based on total forward, total backward linkage and other analysis output, we conform the highest role of services sector in this province. We also find that the final demand for services sector is higher than its intermediate demand, showing this product of this sector is mainly used for direct consumption.
