Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20451526&lokasi=lokal>

Abstrak

Lucas - Rapping model is considered as successful model to explain the labor force in America. We are apply this model on Indonesian case to analyze the fluctuation of labor force and to know wether the shift on labor supply and unemployment is a function of current real wage or not. We also intend to analyze behaviour of household to respond the real wage change.

From demand side, we can trace out how deep the education role on labor force quality. The conclusion may be helpfull on determining appropriate policy on education sector.

We use data from BPS including Indikator Ekonomi dan Keuangan, Statistik Ketenagakerjaan (Sakernas), Keadaan Pekerja/Karyawan di Indonesia, Survei Sosial dan Ekonomi Nasional (SUSENAS) or Survei Penduduk Nasional (Supas). The rest of data is collected from international sources such as Summers Hestona PennWorld Table, data Barro and Lee and data Bank Dunia.
