Many organisations are transforming their businesses through the development of information and communications technologies. The security of this e-commerce is now a key enabler for businesses and this book presents an overview of current and future infrastructures for e-business including XML security mechanisms and next generation Public Key Infrastructures (PKI), as well as digital archiving and wireless security which is set to be a huge growth area with the full rollout of 3G mobile networks. TETRA security, firewalls and Virtual Private Network (VPN) technologies are all discussed to provide business solutions for end-to-end secure networking. This book is essential reading for IT and security professionals as well managers involved in the implementation of e-businesses.
