Abstrak

Pothos scandens L. is a species of the Araceae that has medicinal uses. Unfortunately, there are no *P. scandens* collections in the "Eka Karya" Botanic Gardens in Bali. Recently, a team explored the Merbuk Mountain, in Jembrana District, Bali and found one population of *P. scandens* in the forest. *Pothos scandens* Linn needs to be conserved and given wide publicity, because it has high potential benefits as a medicinal plant.
