

People in control: human factors in control room design

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20452553&lokasi=lokal>

Abstrak

The aim of this book is to provide state-of-the-art information on various aspects of human-machine interaction and human-centred issues encountered in the control room setting. As industrial processes have become more automated, there is increasing concern about the performance of the people who control these systems. Human error is increasingly cited as the cause of accidents across many sectors of industry.
