Abstrak

Penelitian ini mengkaji tentang penerimaan informasi melalui media pembelajaran digital talking book untuk siswa tunanetra. Proses penerimaan informasi terdiri dari tiga elemen, yaitu penyeleksian informasi, interpretasi, dan retensi. Penelitian dilakukan dengan menggunakan metode studi kasus. Hasil penelitian menunjukkan bahwa penerimaan informasi melalui digital talking book di kalangan siswa tunanetra mempunyai tantangan tersendiri. Dalam tahapan penyeleksian informasi, informan menggunakan sumber informasi dari braille dan digital talking book secara bergantian sesuai dengan kebutuhan. Dalam tahapan interpretasi informasi, informan menafsirkan konten digital talking book dibantu dengan catatan dalam huruf Braille. Dalam tahapan retensi, informan mampu mengingat secara baik informasi yang bersifat sementara, seperti kata-kata istilah, angka-angka, dan penjelasan tentang definisi, namun memiliki keterbatasan untuk memori jangka panjang sehingga membutuhkan waktu yang lebih lama.
